Education

JECRC University Jaipur, India
Bachelor of Technology in Artificial Intelligence and Machine Learning *Aug 2023 – Aug 2027*

Experience

Data Science Intern May 2026 – Jun 2026
Unessa Foundation *Remote*

- Automated a pricing analysis workflow that previously required manual spreadsheet review, cutting analyst time on the task by 80%
- Built a pricing engine that scores 100+ candidate price points per prediction cycle and recommends the one with the highest expected revenue

Data Analyst Jun 2025 – Oct 2025
DataSutram *Remote*

- Built a Bank Statement Analyzer in Python that extracts and pattern-matches transaction data, cutting processing time by 70%
- Worked with 15+ credit managers to identify workflow inefficiencies and turned those insights into recommendations that improved loan approval workflows
- Delivered an enhanced Bank Statement Analysis report with statistical analysis and predictive insights, enabling faster credit decisioning

Open Source Contributor Aug 2024 – Dec 2024
GirlScript Summer of Code Extended (GSSOC EXTD24) *Remote*

- Fixed bugs and shipped features across several open-source repos in Python and JavaScript
- Built a FastAPI backend and Streamlit frontend for a demand-forecasting tool that surfaced pricing recommendations to end users

Projects

SAGE – AutoML Platform | *Python, Streamlit, LightGBM, XGBoost, Optuna, SHAP, SQLite* Jun 2026

- Built SAGE (Smart Adaptive Guided Experimentation), an end-to-end AutoML platform with six core modules: an EDA engine, adaptive preprocessing pipeline, seven-model arena with Optuna hyperparameter tuning, SHAP explainability, SQLite experiment tracking, and automated PDF report generation
- Designed a views-based multipage Streamlit UI, letting users upload a dataset, run automated model comparisons, and export a report without writing code
- Deployed the platform on HuggingFace Spaces with version control maintained across GitHub and HuggingFace remotes

Dynamic Pricing System | *Python, Pandas, Scikit-learn, Geopy, XGBoost* May 2026

- Built a pricing model pipeline from raw data through real-time inference, structured so components could be swapped or redeployed independently
- Added reverse geocoding to pull location-based features into the dataset, improving model accuracy by 15%

Technical Skills

Languages: Python, R, SQL, Java
Machine Learning/AI: TensorFlow, Scikit-learn, Pandas, NumPy, Keras, XGBoost, Natural Language Processing, Computer Vision
Cloud & Tools: AWS (EC2, S3, Lambda), Docker, Git, Jupyter Notebook, Postman API
Data Analytics: Power BI, Tableau, Matplotlib, Seaborn, Statistical Analysis, Predictive Modeling

Leadership & Achievements

NASA Space Apps Challenge 2024: Global nominee and pre-final round qualifier for Aquora water quality prediction project
AWS Cloud Club JECRC University: Active member contributing to cloud computing workshops
Certifications: Supervised Machine Learning (DeepLearning.AI), Generative AI (Google Cloud), Postman API Expert
